Abstract

PRINT DRIVER FOR GENERAL APPLICATIONS

5

A printing system is disclosed, comprising storage means (306) in a client computer (112) for storing a client service item file (310) which comprises a set of user selectable service items (eg 804), each service item (804) comprising a set of printing attributes (806-824).

10   The client service item file (310) is updated in accordance to communication with an external apparatus (222). The system also has a client computer user interface (500, 502) by means of which a user can select a particular one of said service items (eg 804) having a particular set of printing attributes (806-824). The system also has a client computer print process driver (200) adapted to process a print job (118) according to the particular

15   set of printing attributes.
